

Evergreen Cedar Series Photovoltaic Modules

EC-100 Series

Features

Designed for maximum performance: safe, reliable, versatile and easy to install. Rugged, durable anodized aluminum frame makes for strong, stable mechanical mounting. Sealed junction box never needs maintenance includes easy, accurate, reliable electrical connections and comes with factory-installed wires, connectors, and bypass diode(s). The EC-100 Series module line comes in 102, 110, and 115 watt configurations with 12V/24V dual voltage capabilities.

Benefits

Each module is individually tested to ensure field performance meets or exceeds specifications. Solar cells are matched to reduce internal losses and the possibility of hot spots. String Ribbon™ polycrystalline solar cells outperform thin films and achieve comparable performance to bulk crystalline technologies while using half as much silicon. Industry standard EVA (Ethyl Vinyl Acetate) and Tedlar™ construction protects solar cells from mechanical and environmental stress.

Evergreen offers a limited 10/25 year power output warranty.
