

Promold Solar Water Trough

A Self Contained Solar Watering System

The Promold Solar Troughs come in a steel skid-able frame that houses the poly trough(s), the battery(s), and attached mast that holds the 50 watt solar panel. Minimal assembly is required. The mast comes with a handle and is removable for easy handling water. In summer application, water is kept cool.

Each 4' x 8' Solar Pasture Water Trough comes with: poly trough, 2" drain plug, extended skid frame to house battery(s), attached mast with handle, 50 watt solar panel, floating pump, float switch, 48' hose and 48' wire. Battery is optional.

With one 50 watt solar panel and battery, this system provides an average of 1400 to 1000 gallons per day, 8' to 10' lift. Recommended for 75 cow/calf pair.

Solar Pasture Water Troughs are available in 8', 16', 24', and 32' lengths.

Capacity: 400 imperial gallons per 8' trough.
