

Plastic Composite Carbon Fiber Wind Turbine Blades

Highly Efficient Wind Generator Blades

Tip

These blades are only 5/16" thick at the highest center point with aerodynamic slopes that gently taper down to knife sharp points on both edges! Cuts through the air like a bullet!!!

Noise Free and VERY fast!

A very professional design! Twisted and tapered for powerful and fast rotation! Made of hardened #T6 aircraft aluminum with nice sharp edges for silent performance.

(Large end)

Basic shape - Not twisted yet

Hubs

HUB6 - 6 blade hubs / Makes 58" diameter turbines.

HUB3 - 3 blade hubs / Makes 62" diameter turbines.

HUB12 - 6 blade hubs/ Makes 64" diameter turbines

17mm hubs are made from top quality steel
